Patriot

Identifiable Property Insurance Claim Validation and Reduction System

Powered by
Recipero

Introducing Patriot

What is Patriot?

Patriot is an online system designed to assist in the validation of insurance claims that relate to identifiable property that have make model and serial numbers such as mobile phones, laptops, pda's, satellite navigations systems etc. In association with the UK Police forces the system also has the ability to reduce fraudulent claims for such property.

How does it work?

Patriot works by bringing together data from a series of databases to provide relevant information to the insurer to validate certain aspects of the claim and also allows direct access to databases of stolen property used by the Police.

Claim reduction.

Patriot allows the insurance company to dissuade fraudulent claims. This is achieved by providing the insurer the ability to report stolen property directly to the UK Police systems on behalf of the claimant rather

than having to rely on the customers word that it has been reported. The system also flags the items as stolen on CheckMEND the second hand trade and publicly checkable due diligence system.

Claimants who are still in possession of the goods perpetrate many insurance frauds as they wish to retain the use of the goods or sell them. Flagging them on the Police national system and CheckMEND via Patriot is a strong deterrent as the chances of being caught in possession of stolen goods is now greatly increased.

The Identifiable Property Insurance Claim Validation and Reduction System

Insurance claim validation.

Patriot allows the insurer to validate the following information when a claim is made:

- Has a check been run on an item by another insurer
- Has another insurer paid out on the item
- Is there a crime reference logged on the system against the item
- If the item is a mobile phone has it been blocked by the networks
- If the item is a mobile phone is the make and model correct
- Has the checking insurer already paid out on the item in the past

What are the benefits of use?

The primarily benefits of use are to help insure claims are fully validated and correctly reported and to help reduce fraudulent claims.

Is Patriot secure?

All information on Patriot is housed on physically secure servers in state of the art secure server facilities. All movement of data across the Internet is encrypted and is protected by state of the art firewalls and anti-hacking software.

Who supports Patriot?

Patriot is supported by all the UK Police forces, the global mobile phone industry and major international blue chip organisations including retailers, manufacturers and insurers. Full details can be found on www.recipero.com.

Who runs Patriot?

Patriot is run by a UK company called Recipero Ltd, whose details can be found on their web site www.recipero.com. They are the world leader in aggregation of data relating to the possession ownership, insurance claim information and associated criminality.
